

Service1 Service

localhost:63045/Service1.svc

Google Chrome isn't your default browser [Set as default](#)

Service1 Service

You have created a service.

To test this service, you will need to create a client and use it to call the service. You can do this using the svcutil.exe tool from the command line with the following syntax:

```
svcutil.exe http://localhost:63045/Service1.svc?wsdl
```

You can also access the service description as a single file:

```
http://localhost:63045/Service1.svc?singleWsdl
```

This will generate a configuration file and a code file that contains the client class. Add the two files to your client application and use the generated client class to call the Service. For example:

C#

```
class Test
{
    static void Main()
    {
        Service1Client client = new Service1Client();

        // Use the 'client' variable to call operations on the service.

        // Always close the client.
        client.Close();
    }
}
```

Visual Basic

```
Class Test
    Shared Sub Main()
        Dim client As Service1Client = New Service1Client()
        ' Use the 'client' variable to call operations on the service.

        ' Always close the client.
        client.Close()
    End Sub
End Class
```

```
WCF Calculator Service Test
Add(10, 5) = 15
Subtract(10, 5) = 5
Multiply(10, 5) = 50
Divide(10, 5) = 2

Testing division by zero...
Error: Cannot divide by zero.
